Fishing Vessel Logs and Records

Purpose

The attached **Fishing Vessel Drills, Tests and Inspections Table** lists the records that should be created and maintained aboard covered ¹ fishing vessels operating in Washington State waters.

The table should be used as a planning aid to schedule and maintain a minimum level of safety management, as specified by the Accepted Industry Standards for Fishing Vessels (AISFV). Company officials, vessel officers, and inspectors should use the table for locating corresponding documentation in the official logs of the vessel.

Background

Ecology vessel inspectors noted that some otherwise well-run vessels were on the verge of being considered a substantial risk by Ecology because of their poor record-keeping practices. Poor record-keeping makes it difficult to verify drills, tests, inspections and training. Good record-keeping is essential to a well-run, safe vessel. Records of drills and inspections aid in crew shifts, watch changes, state and federal inspections, and crew readiness. Record-keeping allows easy transfer of key information that is accurate and timely.

The sample table can be used to aid the vessel's Master in gauging the level of compliance with Washington's oil spill prevention and environmental protection regulations.

Basic Guidelines

The information contained in the attached table is designed to help the Masters of fishing vessels operating in Washington State to understand what is required to manage the vessel in compliance with AISFV.

Use

Write the date the activity was accomplished in the appropriate block.

Events, Miscellaneous Evolutions and Log Book Entries

These are records that are generated when certain onboard evolutions occur. For example when bunkering in Washington State waters; bunker operations records must be generated and retained with appropriate Deck Log Book entries. For a passage through state waters, a voyage plan, tests and inspections and other records must be kept including required Deck and Engine Log Book entries. Safety Reports and Event Reports are requested if the vessel experiences a malfunction or abnormality in State waters. Focus Sheets, Safety Reports, and Event Reports are available upon request.

Continuous Record Keeping

These records should be kept current and permanently maintained aboard the vessel. Changes in the crew or machinery may require changes or additions to management and safety directives and additional training. These changes and additions should be documented in the table.

ECY 070-91 April 08, 2003

¹ Covered Fishing Vessel: Greater than or equal to Three Hundred (300) Registered or International Tonnage Convention (ITC) Gross Tons, as applicable.
